EFFECTIVE MAINTENANCE THROUGH OIL ANALYSIS

TO WHOM IT MAY CONCERN

This is to certify that MICSA 926 contains no additives which could be harmful to any engine parts, seals or gaskets. The base detergent liquid is evaporated after the cleaning action which allows for better adhesion of the P.T.F.E. molecules to all wearing parts. After the prescribed running period no evidence of the detergent liquid or P.T.F.E. is left in the oil. This leads me to conclude that polymerization of the P.T.F.E. has taken place. From personal savings obtained from tests carried out on Micsa 926 under extreme conditions, I have no hesitation in recommending the product.
